Flaky Test Detection - Sample Test Scripts

Test Script 1: test_login_functionality.py

```python
def test_login():
    # Simulate login test
    assert login("user", "pass") == True
```

Test Script 2: test_payment_checkout.py

```python
def test_checkout():
    # Simulate checkout process
    result = process_payment(amount=100)
    assert result == "SUCCESS"
```

Test Script 3: test_search_feature.py

```python
def test_search():
    # Simulate search feature
    results = search("laptop")
    assert len(results) > 0
```

Test Script 4: test_profile_update.py

```python
def test_profile_update():
    # Simulate profile update
    result = update_profile(email="user@example.com")
    assert result == "UPDATED"
```

Test Script 5: test_notifications.py

```python
def test_notifications():
    # Simulate notifications delivery
    notifications = get_notifications(user_id=123)
    assert notifications is not None
```
